Glossary:	31

Problem Introduction

Teachers

- Teachers need access to better supplemental resources
 - Underrepresented sources need more time in the limelight
 - Introduce students to new takes on old ideas
 - Show students the actions that underrepresented groups have taken in the past
 - Reduce 'white-washing'

Students

- Students face many struggles in their pursuit of learning
 - Time management, familial commitment, and difficult lessons
- A consistent struggle is finding reliable resources to aid and reference in their assignments
- The ability to correctly research subject matter is a skill that needs to persist into adulthood
- A student's access to resources greatly determines their success in accurately researching data

SOLs

- SOLs are the Standards of Learning - Virginia's method of measuring the learning and achievement of students in English, mathematics, history, and science.
- For many students these are the culmination of their entire school year.
- SOLs contribute to determining a school's accreditation and the class placement of students. (16)

Impact of COVID-19 on Students

- COVID-19 has negatively impacted students in all districts, economic status and ethnicity as seen by their SOL test scores.
- For example, the reading SOL scores have gone down between the 2018-2019 and the 2020-2021 school year an average of 9% for all students.
- This decrease is more evident for Black, Hispanic, and low-income students, who dropped an average of 11%. (16)

Pass Rate of Virginia Math SOL by Demographic

(17)

Pass Rate of Virginia Reading SOL Tests by Demographic

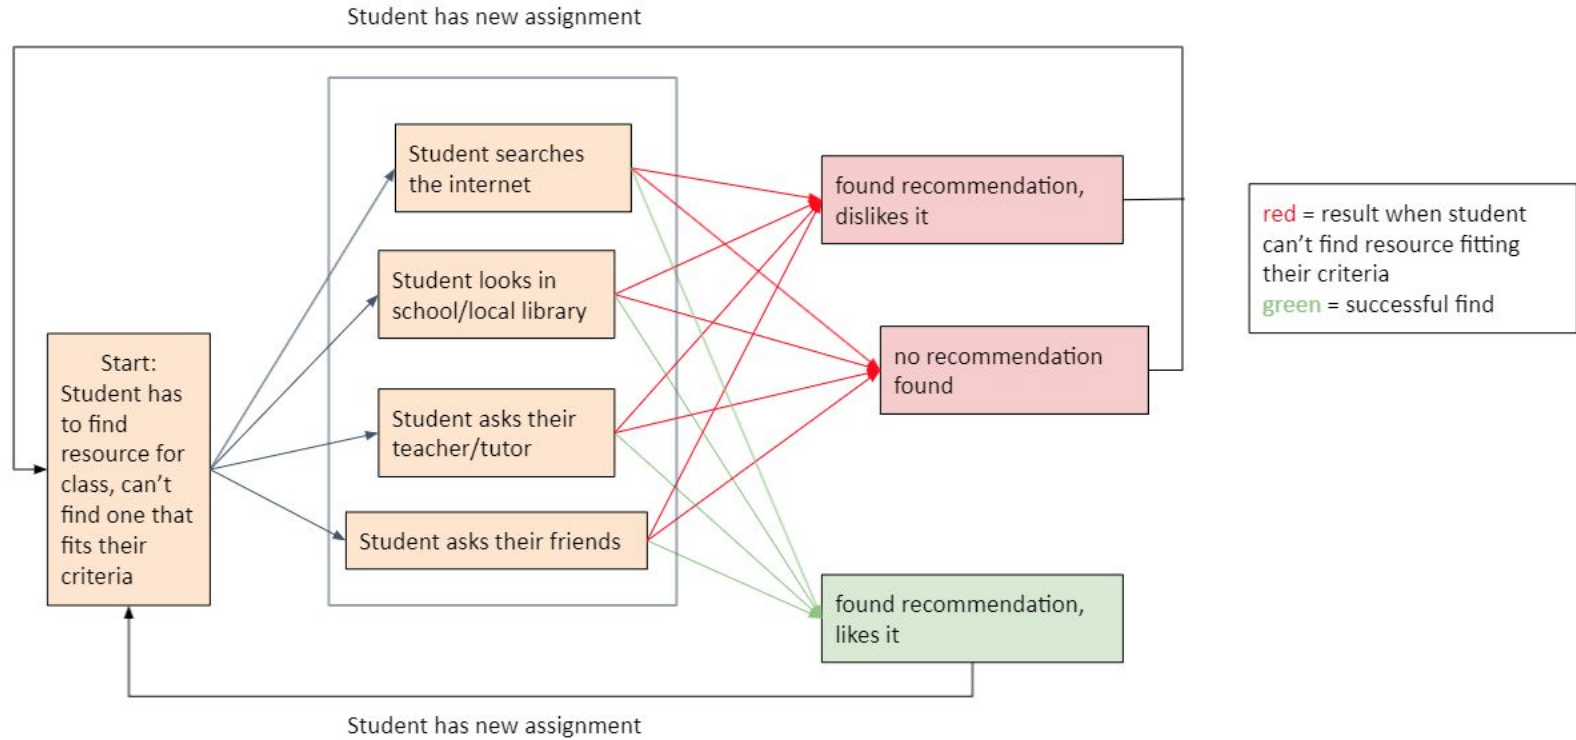

(17)

The Problem

Students' performance are non-optimized because of a lack of materials tailored to their learning preferences

Problem Flow

The *AskMissy* Solution

The AskMissy software application will help users find the resources necessary for them to bridge the gap between conventional and digital learning for a more personalized experience.

Look for Resources About YOU

Filter results about books from a **wide** range of topics based on user preferences

Search resources about/written by authors from different communities: **LGBTQ+, BLM, mental health, etc...**

Allows for a more *personalized* experience

Resource Statistics

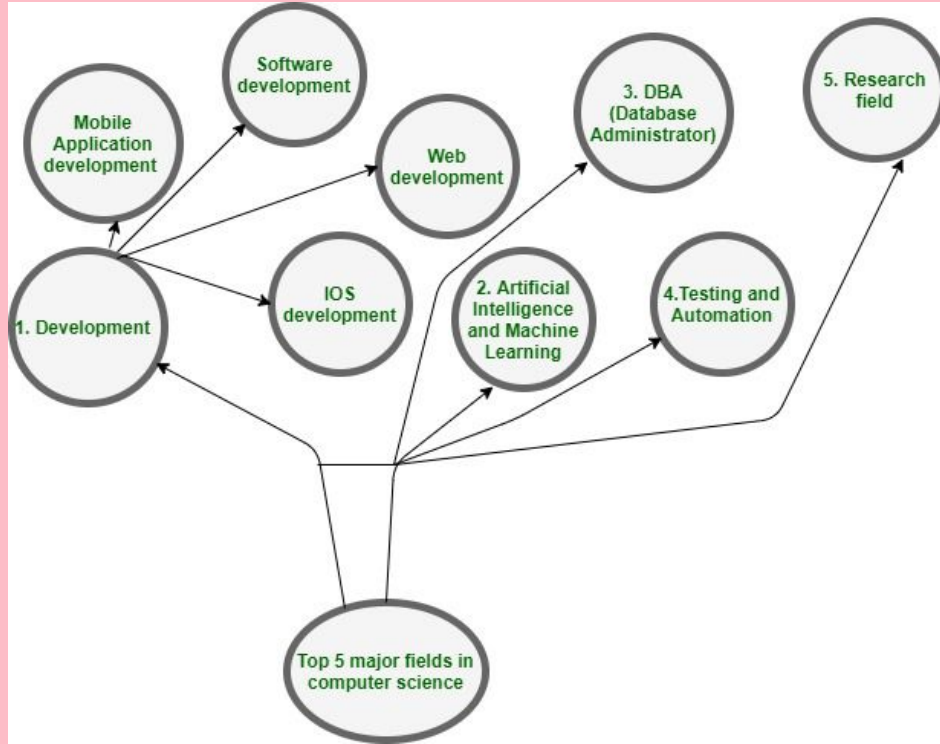

Users can see the individual statistics of each resource they select/search:

- Summary
- ISBN (books)
- Reviews/Ratings
- Authors
- Number of Pages/Chapters (books)
- Genre (books)

For books, users will be able to search through available resources at their nearest bookstore through boolean attributes

Subcategory Search Tool

Provide the users the ability to search for *specific* subcategories about **nonfiction** resources

‘Swipe left/right’ on a book

Text too complicated? Filter through **difficulty/experience** level

Personalized Profiles:

Make profiles **public** *and* **private**

User types

Guest - Given basic search functions

Students - Can display interest on profile, search using full algorithm, provides feedback

Teachers/Tutor - Can display what they teach and organize class groups, provides feedback

Librarian - Keeps inventory of resources, receives feedback

Admin - keeps database

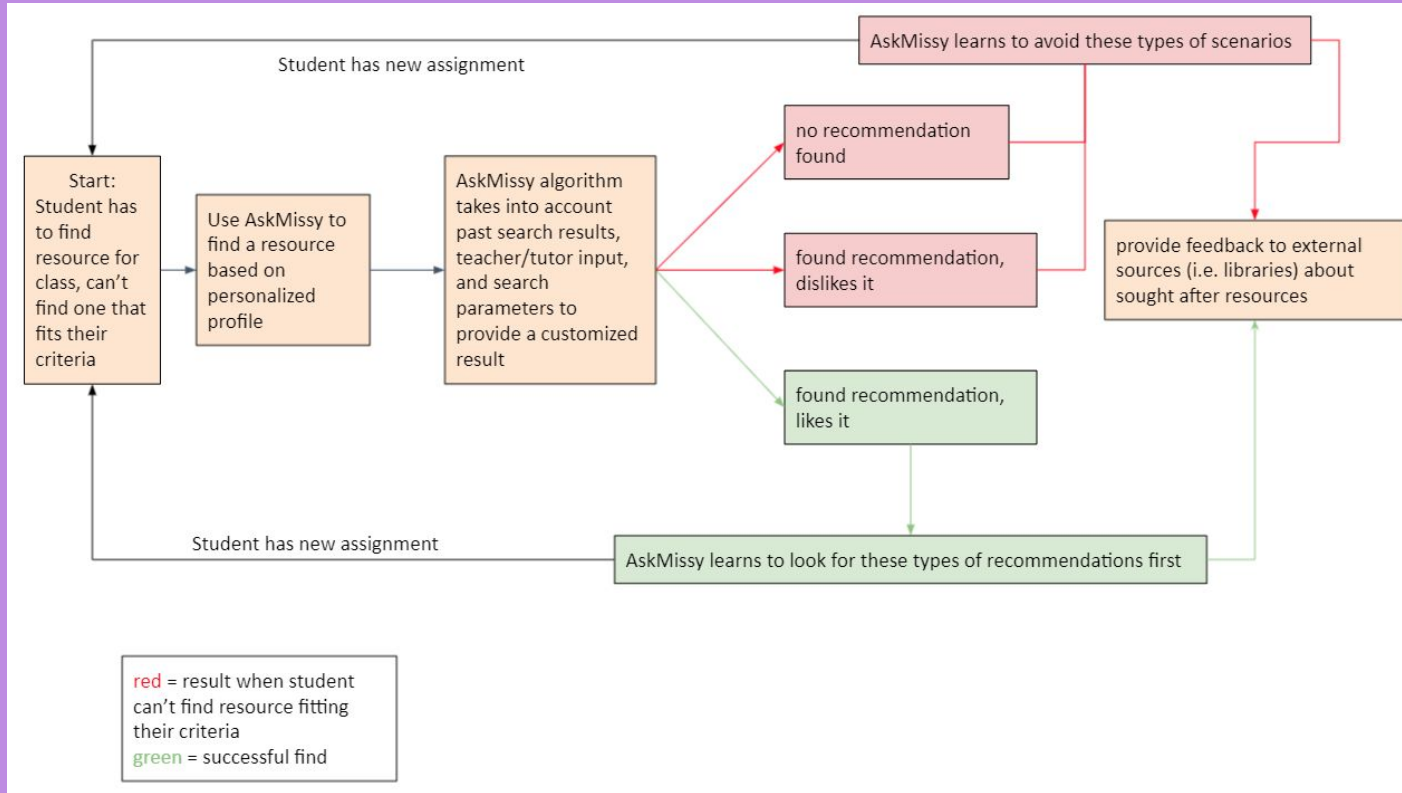

Community/Library Interaction

If the resource you want isn't available where you want it, say something on the app!

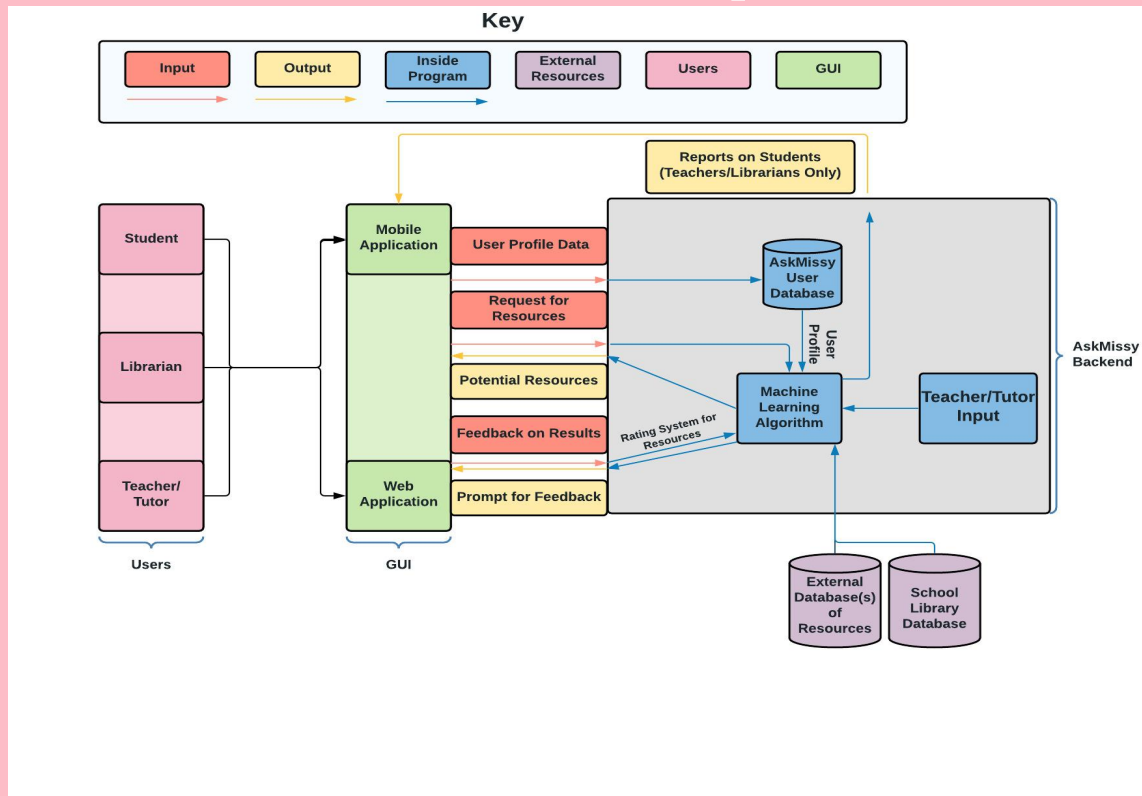

Registered bookstores & libraries will receive feedback to help stay updated with inventory

Solution flow

Major Functional Component Diagram

Intelligent Feedback					✓

Customer Risks

Risk	Mitigation
C1: User is dissatisfied with the application	C1: Users are asked for their feedback on improving the application in future
C2: Users don't get the experience they expected from a resource they searched up	C2: The software will ask the user for their intended experience and tones to look for it in a resource
C3: Texts do not fit the user's personalized preferences or are too hard to read	C3: Users are able to search for specific subcategories and filter results by difficulty level to their liking
C4: Users do not know how to use the AskMissy application	C4: Users are given tutorials on setting up their personalized profiles and all the search/filter tools available to them

Customer Risk Matrix

	Consequence				
Likelihood	insignificant	minor	moderate	major	critical
Almost certain

Pre-Mitigated

Technical & Security Risks

Risk	Mitigation
T1: Searches leading to incorrect or inconsistent results of resources	T1: Thorough testing of the search and filtering algorithms with datasets
T2: The servers can't keep up with the growing database as the app grows popular with users	T2: Implement an architecture for the app that can be scaled up from the user growth
T3: Compatibility with external resources becoming unaligned	T3: Steady connection with external resources to stay up-to-date
S1: User data security breach	S1: Database Encryption
S2: Unauthorized users entering the application	S2: Strong password and authentication methods

Technical & Security Risk Matrix

	Consequence				
Likelihood	insignificant	minor	moderate	major	critical
Almost certain					
likely					
possible		T3			T1
unlikely		T3	T1	S2	S1
rare		T2	S2	T2	S1

Post-Mitigated

Pre-Mitigated

What AskMissy *Won't* Do

AskMissy *won't*:

Teach students directly - it will help users find the appropriate resource

Be a social media platform

Store the full resources found within the database - users will need to obtain resources separately

Conclusion

Student performance is falling across the board

Adjustment to new learning mediums must become a regular aspect of student learning

Individualized resource locator is vital to student learning

Machine learning will provide personalized resource recommendations

AskMissy will allow students to efficiently find resources to aid them in their learning journey

Glossary of Terms

- Agile: Set of frameworks and practices where solutions evolve through collaboration between self-organizing cross-functional teams
- AskMissy: a software application that will help users find more relevant resources
- API: Application Programming Interface
- Data Retention: The continued storage of an organization's data for compliance or business reasons
- Database: Structured data held in a computer
- Economically Disadvantaged: a student in Virginia is considered economically disadvantaged if the student:
 - is eligible for Free/Reduced Meals
 - receives TANF, or
 - is eligible for Medicaid

- File Server: Controls access to separately stored files
- Personal Learning: an educational approach that aims to customize learning for each user's strengths, needs, skills, and interests
- Temporary Assistance for Needy Families (TANF): the TANF program provides eligible families with a monthly cash payment to meet their basic needs.
- User: a user will be anyone using the AskMissy Interface and will fall into the category of a guest, student, teacher/mentor, librarian or admin.
- Web Scraping: Extracting/scraping data from websites
- Web Server: A computer that runs websites
- Windows: Series of operating systems developed by Microsoft
